/note="Vector: pHOS1; Site_1: Bst I; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond (Clark, C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a method for isolate identification. Exp. Parasitol. 77:450.). The DNA was mechanically sheared to give a tight size distribution (~2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      806

Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects: In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)." 897 bp DNA linear GSS 07-AUG-2001 Entamoeba histolytica Sheared DNA Entamoeba histolytica Email: bjloftugetigr.org Clones are derived from the Entamoeba histolytica HM1:IMSS sheared MAN library Seq primer: M13-Reverse Class: shotgun |||| TCCAAGAAGGATAAAAAAAAATACCAGTGATGGAATGAAGGAGAATACGAAGAA----- 781 GATGGTATGATATCTTCAAGAAGTATATCAATC-----AAAAAGAAAAAGATA 703 ileLysProLeuArgAspLys1leGlyLysTyrThrSerValGlyThrArgLysGlnPro 111 -----ATACTTAAAAATATGAGGTAAAAGAAAA 751 ThrLysValProLysHisProLysArgValValValLeuGluTyrSerPheValAspAla 71 LeuValAlaLeuAspValLysProValGlyIleAlaAspAspAsnLysLysAsnArgIle 91 Loftus, B., Wang, Z., Van Aken, S. and Fraser, C. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGACCAAGAGCTCTTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGATTATAATTAATTAATTAATCCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SETI. Cloning sites, 5' end: XhoI; 3' end: SETI.

/clone lib="Wetcor: pHOS1; Site_:" BR I; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond (Ilark, C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

Sanger Xenopus tropicalis EST project 2001
TROPICALIS SEQUENCE ID: TEGG004f24.qlkT7
Sequencing primer: T7
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Aaron M. Zorn.
CDNA was oligo dT primed from Sug of poly A+ RNA from egg.
ECORI-NotI cut cDNA was then ligated into pCS107 with EcoRI at the 5' end and NotI at the 3' end.
Vector: pCS107; Site l: ECORI; Site_2: NotI
Host: Escherichia coli XL1-blue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121
